

ZAGROS CONSTRUCTION' 10 Simple Steps to a Greener Home

1. It would take 100 8.5 in. diameter trees to build a 1500 sq ft home. It takes ZAGROS the steel from 2 recycled cars.
2. ZAGROS homes save energy, as well as money. ZAGROS homes save an average of 35% on their heating and cooling costs from stick-built homes!
3. There is little to no construction site waste to contribute to our nation's landfill crisis!
4. There is very little noise pollution when building your home, your new neighbors will like you already!
5. EPS has always been CFC and HCFC free, protecting the ozone layer!
6. ZAGROS' Expanded Polystyrene building products are made with recycled content.
7. ZAGROS recycles our EPS and makes them into the stuffing for teddy bears and bean bags for children - demonstrating just how non-toxic the material is!
8. Our panels complete four functions in one, fast, high-tech step; framing, insulation, sheathing, and vapor barrier. Using fewer materials to make a superior home!
9. Fire tests have proven that EPS given off fewer toxins than conventional wood framing.
10. The American Lung Association's (ALA) Health House guidelines, among the toughest in the nation for indoor air quality, acknowledges EPS sheathing as a safe material. The installed ZAGROS panels do not experience off-gasing or host molds that may affect indoor air quality!
